

HERISCAN

AI-Powered Heritage Site Identifier & Risk Reporter

PreserveMy.World — Weekly Branding Strategy Report

Team: Solo | Theme: Future Heritage Studio | Track: AI + Web Engineering

Submitted: 27 June 2026

1. Team Information

Field	Details
Team Name	HeriScan
Team Type	Solo Team
Track	Future Heritage Studio
Program	PreserveMy.World (PMW)
Developer	BS Computer Science — FAST-NUCES Islamabad
Submission Date	27 June 2026

2. Problem Statement

Pakistan is home to thousands of heritage sites — mosques, forts, temples, havelis, and archaeological ruins — yet the majority remain undocumented, unmonitored, and unprotected. Existing preservation efforts are fragmented, expert-only, and inaccessible to the general public. When disasters strike, when illegal construction encroaches, or when natural decay sets in, there is no accessible system for citizens to identify, report, or track damage to these irreplaceable cultural landmarks. As a result, Pakistan loses pieces of its history every single day — silently and permanently.

Gaps HeriScan Fills

Gap	Current Reality	HeriScan Solution
No Public Identification Tool	Only archaeologists can identify heritage sites	Upload photo → AI identifies site instantly
No Citizen Reporting System	Damage goes unreported with no formal channel	Anyone can submit damage report with photo + location
No Visual Risk Dashboard	Data is buried in government PDFs	Interactive map with color-coded risk levels
No Damage Tracking Over Time	Decay is invisible until sites are lost	Before/After comparator shows exact deterioration
Heritage Knowledge Inaccessible	Information in academic papers only	Clean, readable history and status for every site

3. Selected Theme

Future Heritage Studio

HeriScan is built under the Future Heritage Studio theme because it is fundamentally a builder project — a technical tool that uses AI, web engineering, and data visualization to solve a real cultural preservation problem.

Why This Theme Fits

- The project uses AI (HuggingFace image recognition) — core to Future Heritage Studio
- React + Flask + Supabase tech stack demonstrates real web engineering depth
- Interactive map dashboard and before/after comparator are builder deliverables
- Content will include screenshots, code snippets, model outputs, and process evidence
- Tone is confident and builder-focused: what was built, how it works, why it matters

4. Ideal Customer Profiles (ICP)

Profile 1 — The Curious CS Student

Attribute	Detail
Name / Age	Bilal, 21
City	Lahore
Occupation	CS / Architecture university student
Motivation	Wants to contribute meaningfully with his tech skills
Pain Point	Sees old buildings deteriorating but has no platform to act
Online Behavior	Active on LinkedIn, follows tech + Pakistan history pages
Why He Uses HeriScan	Can identify sites, report damage, feel real impact

Profile 2 — The Concerned Citizen

Attribute	Detail
Name / Age	Sana, 35
City	Islamabad
Occupation	School teacher
Motivation	Wants students to connect with Pakistani culture and history
Pain Point	No accessible, simple resource exists for heritage sites
Online Behavior	Facebook, WhatsApp groups, occasionally LinkedIn

Why She Uses HeriScan	Simple interface, real information, can report damage near her city
-----------------------	---

Profile 3 — The Technical Mentor

Attribute	Detail
Name / Age	Usman, 28
City	Karachi
Occupation	Software engineer / hackathon mentor
Motivation	Wants to see Pakistani students build real impactful tech
Pain Point	Most student projects solve fake problems with no real-world value
Online Behavior	Very active on LinkedIn, GitHub, Twitter/X
Why He Follows HeriScan	Real problem + real tech stack + impressive execution

5. Age Demographic & Platform Choice

Demographic	Priority	Reason
University students (18–24)	Primary	Core users — technically curious, socially active, care about impact
Young professionals (25–32)	Secondary	Mentors, developers, people who can amplify the project
Educators & citizens (33–45)	Tertiary	Practical users of citizen reporting feature

6. Visual Identity

Color Palette

Role	Color Name	Hex Code	Purpose
Primary	Deep Navy	#0A0F2C	Technical, serious, trustworthy
Accent	Electric Teal	#00D4AA	AI/tech feel, modern, stands out
Secondary	Warm Stone	#C4A882	Connects to heritage, earthy
Background	Off Black	#0D1117	Clean dark tech aesthetic
Text	Pure White	#FFFFFF	Clean readability

Typography

Role	Font	Reason
Headings	Space Grotesk	Modern, technical, strong — Google Fonts (free)
Body Text	Inter	Clean, highly readable — Google Fonts (free)
Code / Data	JetBrains Mono	Technical credibility — Google Fonts (free)

Logo Direction

Overall Visual Tone

Element	Direction
Feel	Dark, technical, serious, trustworthy
Imagery	Screenshots, maps, site photos, before/after comparisons
Icons	Minimal line icons only
Layout	Clean grid, generous whitespace
Avoid	Bright random colors, vintage filters, tourist-feel, clip art

Mood Board Keywords

Precise · Intelligent · Grounded · Pakistani · Impactful

7. Tone of Voice

Tone Attribute	Description	Example
Confident	We built this. Here is how it works.	HeriScan identifies any Pakistani heritage site from a single photo.
Grounded	Real problem, real solution, real Pakistan.	Over 700 documented heritage sites. Thousands more at risk. No system to track them. Until now.
Technical but accessible	Show the work without losing non-technical readers.	Powered by HuggingFace image recognition and a live Supabase database.
Mission-driven	Every post connects back to preservation.	Every photo uploaded is a piece of history documented.

8. Public Presence

Platform: GitHub Pages

A clean, professional project webpage hosted on GitHub Pages serving as HeriScan's public presence. The page communicates the project mission, tech stack, team identity, and visual branding — and will link to the live tool once built.

Page Sections

- Hero section — HeriScan name, tagline, and call to action
- Problem — why Pakistan's heritage is at risk
- Solution — what HeriScan does
- Features — 4 core features with icons
- Tech stack — React, Flask, Supabase, HuggingFace, Leaflet.js
- Team — solo developer profile
- Contact / follow link

9. Why This Theme Fits Our Team

HeriScan is the ideal Future Heritage Studio project for three reasons:

First, it demonstrates real technical depth.

The project combines AI image recognition, a React frontend, a Flask backend, Supabase real-time database, and Leaflet.js map visualization — every layer is a real engineering decision, not a template.

Second, it solves a real, urgent Pakistani problem.

Pakistan loses heritage sites to urbanization, climate change, and neglect every year. No accessible citizen tool exists to identify, report, or track this loss. HeriScan fills that gap directly.

Third, it is fully buildable as a solo project.

Every feature — AI identifier, citizen reporter, risk dashboard, before/after comparator — is implementable with free tools and the developer's existing skills in React, Supabase, and Python.
